

You wouldn't... ...**would you?!**

If the picture above isn't scary enough for you, listen to this...

...ear infections can easily be passed from one patient to another by re-using unclean Jet Tips. During the course of a busy day, the only real way of ensuring that you use a clean tip for each patient is to use a new **Propulse Disposable 'One Use' Jet Tip** every time you use the Propulse Ear Irrigator.

If you come into contact with a Hepatitis B carrier, the virus could be present in their ear wax (Kalcioğlu, M. et al (2004)). Practice safer ear care - always use a new **Propulse Disposable 'One Use' Jet Tip** for each patient.

Propulse Disposable 'One Use' Jet Tips minimise the risk of cross infection through ear care.

So lets face it, re-use a Jet Tip? You just wouldn't... **would you?!**

Remember: Only use genuine Propulse spares and accessories with your irrigator or your warranty may be invalid.
