

Propulse® Head Lamp

The range of Propulse® accessories are designed to complement the Propulse® Electronic Ear Irrigator and provide everything the clinician needs to carry out safe and effective ear care.

Illumination of the ear canal is essential when performing ear irrigation. The new Propulse® Head Lamp provides an excellent light source that allows the practitioner to clearly see inside the ear during the ear care procedure.

The flexible “Goose Neck” design provides the user with a perfect multidirectional light source encompassed in a comfortable, lightweight and stylishly designed head lamp.

Powered by 2 x AAA batteries, the bright white light allows true tissue colour recognition in the ear canal at a price that provides better value than similar LED versions.

Features

- Flexible “Goose Neck” design provides flexibility of movement
- Comfortable and light weight
- Bright white light provides excellent illumination of the external auditory meatus
- Elasticated headband fits all users
- Simple push button on / off switch
- Powered by 2 x AAA Batteries (supplied)
